

Computer Workstation Assessments

The Computer Workstation Assessment (DSE) regulations require employers to take steps to manage the risks that IT users may face.

The essential steps to compliance involve identifying, reducing and monitoring risks in the workplace to avoid all the problems that come with poor workstation provision, or from either over-use or misuse.

Our Premier Physical Healthcare consultancy expertise in this area helps corporations to address the major problems they face.

Our Bespoke DSE (Display Screen Equipment) Package

We tailor our DSE work to the specific needs of the client organisation:

- ◇ Initial site visits to assess the requirements.
- ◇ Specialist Computer Workstation Risk Assessments.

We perform Specialist Computer Workstation Risk Assessments on workstations and users where local assessors are outside their competence.

In addition, we offer a host of support services including:

Workstation Design - Particularly useful for complex environments such as control rooms, etc.

Workstation Specification - Specifying workstation requirements based on the tasks of users and the equipment they use.

Homeworking has become more and more common, and the need for both employers and homeworkers to manage the risks is more important.

Computer Workstation Policy Production - We can help you produce Computer Workstation Health and Safety policies, such as eye-sight testing and home working.

Computer Workstation Management Briefings - We will clearly identify action requirements and follow up responsibilities.

Computer Workstation Risk Assessor Training - A two-day intensive training course, to ensure that you have trained local assessors enable to carry out your desk assessments.
